

Nautic Alert VTracker™

the New Standard for Simplicity and Reliability

Nautic Alert VTracker™ and mobile app provides an extremely simple and reliable user experience for global tracking, security, and monitoring providing an insurance compliant solution in a compact energy efficient design.

VTracker provides state-of-the-art reliability, accuracy and power savings with nex-gen technology using two-way global satellite communication.

VTracker offers vessel tracking, an anchor alarm, anti-theft, primary DC bank alerts and trending, and a fleet view interface. Dual configurable zone inputs, a dedicated solid-state switch output, a backup battery input, and a regulated 12V output allow for scalability of additional features such as a remote kill switch, security sensor, bilge pump float switch, backup battery or SOS button.

VTracker can be covertly installed and only requires battery power and antenna connections or can be easily expanded with security and bilge monitoring options.

Mobile app enables global reliable push notifications where text messaging and cellular service is deemed unreliable. The mobile app is available for Apple and Android.

VTracker can be installed with an optional arming switch and visual LED indicator. This enables a discrete visual indicator to be mounted separate from a hidden arming switch, which is otherwise typically located on or around the console where thieves know where to look.

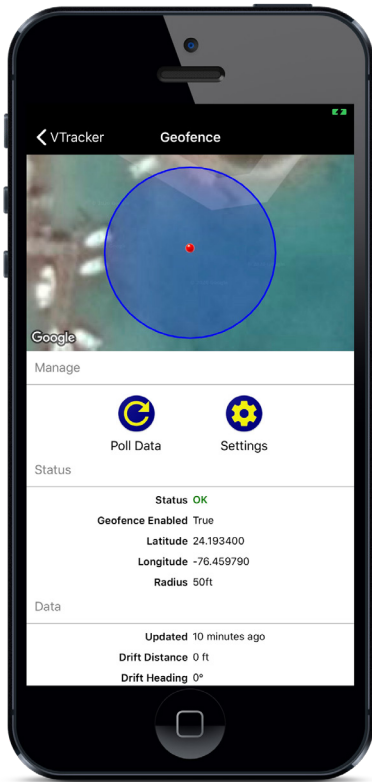

Best of all, monthly costs for VTracker rival that of cellular IoT devices, and are 50-75% lower than alternative satellite-based trackers with two-way communications due to Nautic Alert proprietary and highly-optimized data payload transfers method.

Iridium High Performance Antenna

GPS High Performance Antenna
Note: Sold separately

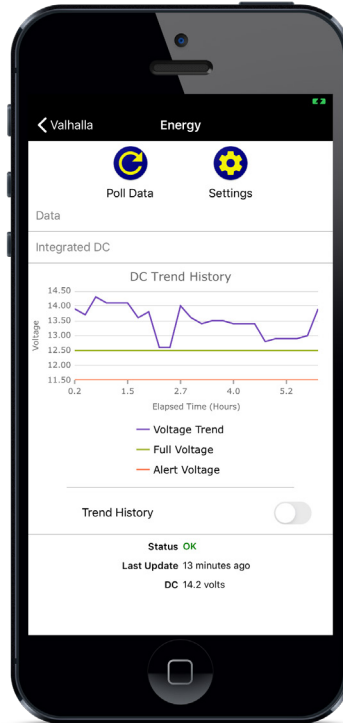

VTracker includes a high-precision ultra-reliable anchor alarm/geofence that can be set to as little as 50 feet, and intelligently auto adjusts as the signal degrades to prevent false alerts, where other products show movement. In addition, an optional Cloud Watch subscription enables fail-safe detection of a compromised system, notifying in minutes of an intentional communications jamming or removal attempt.

Mobile app enables route playback and an easy-to-use real-time fleet view at no additional costs.

VTracker's ultra-low power design draws 60mA on 12V, enabling it to be used 24/7/365 for months of continuous operation on a single house bank.

An optional backup battery can be added for power redundancy, and Nautic Alert's mobile DC chart interface allows for visualized representations of battery trickle charge health and alerts.

Nautic Alert VTracker™ tracks the location of your boat or yacht in real-time with unmatched precision. Using the award-winning Nautic Alert SMART geofence technology, it will learn and detect the location and a change to the location **in as little as 50 ft.** with the high performance antennas using an onboard self-aware geofence, rather than a web-based geofence.

ORDERING INFORMATION

Nautic Alert VTracker
 Iridium Performance Antenna
 GPS Performance Antenna
 Reporting Services Satellite (Monthly)

Part Number	Price
NAVT-01	MSRP: \$999
IRIDIUM-100	MSRP: \$254
AT-GPS-GLON-10	MSRP: \$267
NARS-SS-ST-12	MSRP: \$30

OPTIONAL COMPONENTS

Antenna LMR Cable Assembly, 25ft
 GPS Antenna Cable Assembly, 50ft
 Iridium Antenna Cable Assembly, 50ft
 Antenna Pipe Adapter M18 to 3/4"

RF-CABLE-25FT	MSRP: \$154
RF-CABLE-50FT	MSRP: \$205
RF-CABLE-50FT-I	MSRP: \$287
ATNPT-100	MSRP: \$69

Note: Prices subject to change

SPECIFICATIONS

DC Input Voltage: 6-37V DC
 Nominal Current: 60mA (12V)
 -10 to 60C Ambient

WARRANTY

2-year non-transferable limited warranty
